## *Led Plaque Installation Instructions*

- 1) Select a location for the plaque in an easy to drill spot (recommended on the front exterior garage wall) with easy access to an electrical outlet in the interior**
- 2) use a level or siding line to mount the bracket and screw the bracket in with 2 screws (not provided)**
- 3) drill a 1/2" feed through hole from exterior to interior diagonally below bracket, around an inch below and 4 inches to the right (2" to the right for 11" plaques), so the wire will be hidden behind plaque.**
- 4) Hold plaque up and feed wire through hole, (tape it to a straight stick, i.e piece of metal hanger).**
- 5) hang plaque onto plaque using screws that are half screwed in to top of plaque.**
- 6) tighten screws on top of plaque.**
- 7) the led plaque is 12v, if you attach it directly to mains it will burn out, so use power supply or transformer provided.**
